PROFESSIONAL SUMMARY

Senior Backend Software Engineer with 4 years of experience designing and delivering high-performance, mission-critical backend systems in fintech payments and enterprise SaaS environments. Specialises in Java programming, Spring Boot, and distributed microservices, with direct production experience in card payment processing, high-volume transaction pipelines, and scalable RESTful API and Webhook design. Strong analytical skills and meticulous attention to detail, with a track record of identifying and resolving complex system issues under production load. Brings clear verbal and written communication skills to cross-functional collaboration with Product, Data Science, and Engineering stakeholders. Committed to ethical engineering practices, continuous integration, cloud computing, and a launch-fast, iterate-often delivery culture.

SKILLS

Languages & Frameworks: Java, Spring Boot, Spring Batch, Hibernate, Python, JavaScript, React.js, Groovy

Backend & APIs: RESTful APIs, SOAP, Webhooks, Microservices, Distributed Systems, Event-Driven Architecture, Message Queuing, Kafka, RabbitMQ, Async Processing

Cloud & DevOps: Docker, Kubernetes, Jenkins, CI/CD Pipelines, Azure DevOps (ADO/TFS), Oracle Cloud, Git (Version Control), Bitbucket, Maven

Databases: PostgreSQL, MySQL, Oracle SQL, Informix

Testing: Unit Testing (JUnit, Mockito), Integration Testing, End-to-End Testing, Automated Test Pipelines

Practices: Agile/Scrum, Code Reviews, Software Architecture, API Design, Full SDLC, Technical Mentoring, Analytical Problem Solving, Organisational Planning

WORK EXPERIENCE

Senior Software Engineer - GoSaaS Inc.

Enterprise SaaS | Oracle Fusion ERP Integrations | Distributed Microservices | Spring Boot

Jan 2025 - Present

- Designed and built fault-tolerant product integrations between enterprise ERP workflows and third-party systems, applying meticulous attention to detail in dynamic field mappings and real-time API synchronisation with explicit focus on idempotency, error recovery, and scalability under production load.
- Architected Spring Batch schedulers for automated SOAP-based data extraction, parsing and validating large volumes of unstructured XML into structured Java domain objects – extending core platform reliability for high-frequency data flows.
- Conducted structured research and analysis of distributed system architecture options, recommending event-driven patterns and message-based decoupling that improved resilience and throughput across microservices.
- Wrote comprehensive unit and integration tests for API integration layers and scheduler pipelines, achieving over 85% test coverage on critical data flows and significantly reducing regression incidents in production.
- Automated Docker image builds and Kubernetes CI/CD deployment pipelines for cloud-hosted microservices, cutting average deployment time by 40% and eliminating environment-specific configuration drift across staging and production.
- Mentored junior engineers through code reviews and pair sessions, communicating complex technical concepts clearly and empathetically to foster analytical thinking and engineering ownership within the team.
- Partnered with customer support to investigate and resolve production defects, applying systematic root cause analysis and implementing durable fixes with a strong sense of ownership and urgency.
- Delivered Agile/Scrum ceremonies via Azure DevOps, demonstrating strong organisational skills in sprint planning, backlog refinement, and cross-functional team alignment.

Software Engineer - i2c Inc.

Fintech | Card Payments Processing | High-Volume Transaction Systems | Java | Spring Boot

July 2022 - Jan 2025

- Designed and maintained high-concurrency Java/Spring Boot systems processing millions of card payment transactions daily – covering statement generation, settlements, reversals, and financial reporting in a mission-critical, always-on environment with 99.9%+ uptime targets.
- Built automated data processing pipelines for sensitive financial transactions across multiple card schemes, upholding ethical data handling standards with strong emphasis on correctness, auditability, idempotency, and fault resilience under peak load.
- Applied detailed analytical investigation to optimise PostgreSQL query performance and batch workflows, achieving approximately 30% throughput improvement while preserving transactional integrity under high-volume payment load.
- Developed and integrated RESTful web services and Webhooks supporting card payment flows, ensuring reliable and consistent behaviour across distributed system boundaries.
- Mentored 3 junior engineers and led systematic code reviews, reducing average PR cycle time by 25% and delivering measurable improvement in team-wide code quality metrics over two consecutive quarters.
- Researched and analysed transactional data patterns using structured analytical methods to support risk-aware, data-driven decisions in production payment systems – surfacing actionable insights that directly informed platform improvements.

KEY PROJECTS

Approval Workflow & Job Scheduling Portal - GoSaaS Inc.

Spring Boot | Oracle JET | Knockout.js | PostgreSQL | Docker | Kubernetes | Oracle Cloud Feb 2025 - Present

- Built a modular, cloud-native approval and job scheduling platform on Oracle Cloud with real-time tracking, retry logic, and rollback mechanisms ensuring data integrity across distributed job execution. Reduced job execution delays by 60% through ViewModel and component-level optimisation.

Intelligent Data Classification System - Final Year Project, PUCIT

Java | Spring Boot | Quartz Scheduler | REST APIs | Oracle SQL | Maven | Git | Jenkins

- Designed an ML-powered pipeline to automatically classify unstructured datasets at scale, conducting structured research comparing rule-based and learning-based approaches. Delivered measurable accuracy improvements with a full end-to-end architecture from ingestion through evaluation.

EDUCATION

BS Computer Science - PUCIT, Lahore

Nov 2018 - June 2022

Intermediate in Computer Science - Punjab Group of Colleges, Lahore

Sep 2016 - June 2018

CERTIFICATIONS & ACHIEVEMENTS

Oct 2025 Oracle Redwood Application 2025 Developer Associate (1Z0-1114-25)

June 2025 Oracle Fusion AI Agent Studio Foundations Associate - Rel 1 (1Z0-1145-1) - 98% Score

2022-2023 Outstanding Performer of the Year - i2c Inc.

LANGUAGES

English - Full Professional Proficiency | Urdu - Native or Bilingual Proficiency
